COMOS 10

Innovations for plant management of the future

The new COMOS 10 software generation enhances your competitive advantages with better integration, greater interoperability and innovation.

Intelligent interfaces for the optimal integration of third-party systems.

We give you the competitive edge

Our COMOS software solution supports engineering and operational phases in order to streamline the workflows and processes so that plant engineers and owner operators will enjoy the benefits of enhanced productivity and quality. The new software generation COMOS 10 gives you a sustainable competitiveness with the help of three decisive factors: Better integration, greater interoperability and innovation.

Better integration:

Limitless data exchange and future-oriented data management by the new COMOS Enterprise Platform

The new platform concept of COMOS offers extended functionality for cooperation across systems and locations. Workflows can run in parallel both during the engineering and operational phases. This caters to critical enhancement in efficiency for engineering and asset management processes. The unique and open system architecture and consistent COMOS data platform

facilitate the quicker and more secure management of ever increasing data volumes. Extended connection options to Microsoft Office solutions and e-mail services simplify the task of document management. In addition, data from third party applications, for example, ERP or control engineering systems can be integrated easily into COMOS 10.

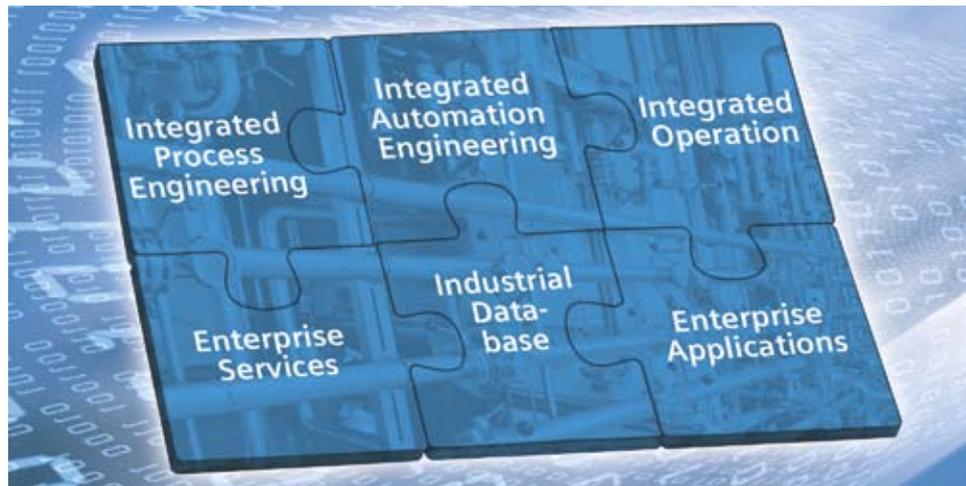

Continuous plant management - from engineering to automation right up to plant operation

The integration of COMOS and the process control system, SIMATIC PCS 7, achieves the next level with the COMOS 10 software generation. An intelligent interface ensures bidirectional information exchange between the engineering and process control systems. This interaction of plant engineering and automation is a decisive milestone on the way to maximum efficiency.

*Your benefits with
COMOS Enterprise Platform*

- High speed, while offering data handling capability to tackle large data volumes
- More connected than ever with Microsoft tools & email services to realize highly efficient document management
- Highest flexibility with portable devices
- System ready for industry requirements

The new COMOS Enterprise Platform

Limitless data exchange and future-oriented data management

Greater interoperability:

Consistent information management serves as the key to efficient plant management

The unique and consistent data basis and compliance with common standards enables COMOS to have independent systems and technologies work seamlessly with software connections that are frequently different from one another. In this manner, several people from various disciplines located all across the world can work together on one plant project. This expedites exponentially the development and decision-making processes.

The new software generation, COMOS 10, facilitates the management of large data volumes quickly and easily with the COMOS Enterprise Platform. Thanks to the service-oriented architecture (SOA), large-scale amendments or print commands can be transferred easily without loading the workstation of the user. This significantly enhances the productivity of the individual employees.

Innovation:

Competitive advantages thanks to software-based value addition

Closeness to markets and customers as well as continuous research and development is our approach to the creation of added value for our customers.

With the new COMOS Enterprise Platform, we expand the options for integrated data and document management using COMOS specifically for the most diverse segments of the industry. Thus, for example, with our solution, we provide customers in the pharmaceutical industry with the preparation of a customized document structure in the design and engineering phase itself. A prerequisite for successful project controlling is achieved with the help of clear allocation of responsibilities and time schedules. In addition, the entire plant can be qualified across all phases of engineering and operation.

Mobility ensures maximum flexibility

The significance of portable terminal devices has grown increasingly for efficient plant management. Your mobility and flexibility are ensured with the new COMOS App. The Internet-based solution enables designers and operators to access information regarding the project status and to comprehend the current plant processes anywhere, anytime.

Ask us about COMOS solutions!

Let us plan your future-proof plants together. For further information, please visit our website.

COMOS is the only integrated and object-oriented software solution in the world for the process industry that enables seamless cooperation between all disciplines involved across the entire plant life cycle.

The new COMOS App. enhances flexibility by providing mobile access to all plant information.
